

Your Window into Severe Weather!

Find out more at <http://www.thorguard.com/software/>

What is ThorMobile?

ThorMobile is a web-based viewing tool that resides on a website to display your live THOR GUARD sensor data on mobile devices along with a map of NWS radar and warnings.

What devices can view ThorMobile?

You can use iPhones, iPads, Android phones, tablets, Windows PCs, Macs, and most any other Internet-connected devices to view your THOR GUARD data with ThorMobile.

What software must be installed to use ThorMobile?

You will need to install the ThorPCX software on a Windows PC that is receiving data from your THOR GUARD system. ThorPCX then will send data to a THOR GUARD-hosted server. If desired, you can also host the data on your server.

Is this an App that I have to download?

No, the end-user does not need to install any software or apps to view ThorMobile. This is a Web App, so the web browser that is already built into your device is all you need. Just point to the URL (web link) for your ThorMobile display and start viewing your data.
